Not recommended at these pressures. Radius shown in meters. Toro recommends the use of a 30mm swing joint at flows over 95 LPM. Sprinkler radius of throw per ASAE standard S398.1. Actual site conditions must be considered when selecting the appropriate nozzle. All sprinklers are equipped with the fixed pilot valve at pressure settings 65 or 80 psi.

FLEX800™ SERIES GOLF ROTORS FLX35/FLX55

The New FLEX800 35/55 Series features a dual trajectory main nozzle that provides exceptional nozzle performance at the 25° standard angle position and great performance in windy applications at the 15° low angle position. The part/full circle drive allows you to adjust the area of coverage to match your seasonal watering needs or meet watering mandates in seconds with no additional parts required.

Features & Benefits

Dual Trajectory 25° or 15°

The 25° setting provides maximum distance of throw and the 15° setting provides improved wind performance, radius reduction and obstacle avoidance.

Industries Largest Nozzle Selection

Nozzles from 13.1m - 28.0m radius plus a wide assortment of back nozzles lets you put the precise amount of water exactly where you need it. All nozzles threaded in from front.

Ratcheting riser

Toro exclusive, simply pull up the riser and ratchet it to the precise position you want to water.

Radius Reduction Screw

Allows for fine tuning the radius to exactly the distance you need. In combination with main nozzle sizing and trajectory adjustment, the radius reduction screw (363-4839) can effectively reduce the sprinkler throw down to 9.1m.

True Part and Full-Circle in One – (40° - 330° part circle)

These sprinklers can be full circle today and part circle tomorrow allowing you to adjust the area of coverage to match your seasonal and watering needs.

FLEX800™ SERIES GOLF ROTORS FLX34/FLX54

The FLEX34/54 sprinklers offer a full circle only option in the NEW FLEX800™ Series. The dual trajectory main nozzle provides exceptional performance at the 25° standard angle position and great performance in windy applications at the 15° low angle position. The consistency of the constant velocity full circle drive ensures even water application across the coverage area every time you water.

Features & Benefits

Dual Trajectory - 25° or 15°

Provides two selections for the main nozzle trajectory; the 25 degree setting provides maximum distance of throw and the 15 degree setting provides improved wind performance, radius reduction and obstacle avoidance.

Industries Largest Nozzle Selection

Nozzles from 15.8 – 30.5m plus a wide assortment of back nozzles lets you put the precise amount of water exactly where you need it. All nozzles threaded in from front.

Stainless Steel Valve Seat

Eliminates body damage from rocks and debris. This in-destructible stainless steel seat is moulded to the body and virtually eliminates body replacements due to seat damage.

Optional Radius Reduction Screw

Allows for fine tuning the radius to exactly the distance you need. In combination with main nozzle sizing and trajectory adjustment, the radius reduction screw can effectively reduce the sprinkler throw to 9.1m.

Constant Velocity Full Circle Drive

Ensures consistent rotation speeds when matched with station run times for even water application across the coverage area, every time you water.

■ Not recommended at these pressures. Radius shown in meters.
 Toro recommends the use of a 30mm swing joint at flows over 95 LPM. Sprinkler radius data collected in Toro's zero wind test facility per ASAE standard S398.1.
 Actual site conditions must be considered when selecting the appropriate nozzle.
